TROUBLE SHOOTING

When engine fails to start:

Diagnoses | Causes
--- | ---
There is fuel, but spark plugs fail to ignite. | Drawing too much fuel.
No power at the terminal. | Faulty spark plug gap.
Faulty spark plug insulation.
Faulty TCI unit or broken wire.
A break or short in the ignition coil.
There is fuel and spark plugs ignite. | Bad mixture.
Compression is good. | Faulty packing or tightening.
Spark plugs not tightened properly.
Piston rings are sticking.
Compression is bad. | No fuel in the tank.
Fuel valve is faulty or fuel tank air vent is plugged.
Carburetor element is plugged up.
Air has entered fuel line joints.
Faulty spark plug gap.
Faulty spark plug insulation.
Faulty TCI unit or broken wire.
A break or short in the ignition coil.
No fuel in the tank.
Fuel valve is faulty or fuel tank air vent is plugged.
Carburetor element is plugged up.
Air has entered fuel line joints.
Faulty spark plug gap.
Faulty spark plug insulation.
Faulty TCI unit or broken wire.
A break or short in the ignition coil.
No fuel in the tank.
Fuel valve is faulty or fuel tank air vent is plugged.

Engine fails to run smooth:

Diagnoses | Causes
--- | ---
No power | Air cleaner element is plugged up.
Compression is good and there is no miss fire. | Air has entered fuel line joints.
Faulty choke lever.
Carbon build-up on cylinder muffler.
Burnt spark plugs.
Short in cable.
Compression is bad, and there is miss fire. | Bad mixture or piston ring wear.
Marks on cylinder, cracks in the piston head.
Fuel is too low (mixture is too thin)
Faulty mixture, not enough mixture.
Carbon piled up, overloaded operation.
Faulty spark plugs.
Plugged cylinder or coolant lines.
Engine overheated | Carburetor not adjusted properly.
Faulty spark plugs.
Faulty magneto or internal short.
Overheated cylinders.
Overload operation.
Faulty mixture or incorrect ratio.
Internal engine damage.
Inaccurate explosion | Carburetor not adjusted properly or faulty compression.
Fuel valve is faulty or fuel tank air vent is plugged.
Engine doesn't sound right | Poor gasoline oil quality.
Carbon pile-up.
Slow acceleration | Poor gasoline oil quality.
Carbon pile-up.

FOREWORD

This Owner's/Operator's Manual is designed to familiarize the operator with the various features and component parts of the equipment and to assist you with the assembly, operation and maintenance of your new MIST DUSTER.

It is essential that any operator of this MIST DUSTER reads and understands this manual before using the MIST DUSTER.

Important safety instructions will be identified by the following safety symbol:

Failure to comply with the instructions in this manual may result in serious injury or death.

For additional assistance, contact any local authorized Maruyama dealer or Maruyama U.S., Inc., 3570 Shelby Lane Denton, TX 76207 U.S.A Phone(940)383-7400

Web:www.maruyama-us.com

MANUAL SAFETY SYMBOLS

Throughout this manual and on the product itself, you will find safety alerts and helpful, information message preceded by symbols or key words. The following is an explanation of those symbols and key words and what they mean to you.

This symbol accompanied by the words WARNING and DANGER calls attention to an act or condition that can lead to serious personal injury to operator and bystanders.
Limited Warranty Statement

All Maruyama commercial/industrial products are warranted to the original purchaser to be free from defects in material and workmanship from the date of purchase for the time periods listed as follows:

- Lifetime for inner drive shaft on trimmers and brushcutters and all ignition modules.
- 5 years for Commercial and Residential use.
- 1 year for Rental use.

All Maruyama engines and Kawasaki TK45/TK65 are covered exclusively for five years of industrial, commercial, institutional, and income-producing use. These engines are warranted for one year of rental use. This warranty will be in full effect provided the engine is operated for the initial 80 hour optimization period using Maruyama Premium 2-Cycle oil. After the optimization period the engine should always be run with either Maruyama Premium 2-Cycle oil or equivalent ISO-L-EGD & JASO FC 2-Cycle oil.

Any part of a Maruyama product found to be defective within the applicable warranty period shall, at Maruyama’s option, be repaired or replaced without charge. Warranty consideration is obtained by delivering any Maruyama product believed to be defective to an Authorized Maruyama Servicing Dealer within the applicable warranty period. The purchaser shall not be charged for diagnostic labor that leads to the determination that a warranted part is defective, if the diagnostic work is performed at a Maruyama Dealer. Any warranted part which is not scheduled for replacement as required maintenance, or which is scheduled only for regular inspection to the effect of “repair or replace as necessary” shall be warranted for the warranty period. Any warranted part, which is scheduled for replacement as, required maintenance shall be warranted for the period of time up to the first scheduled replacement point for that part. Maruyama Mfg. Co., Inc. is liable for damages to other engine components caused by the failure of a warranted part still under warranty. The purchaser is responsible for the performance of the required maintenance, as defined by Maruyama Mfg. Co., Inc. in the Owner’s/Operator’s Manual.

EMISSION-RELATED PARTS WARRANTY: In addition to the above warranty coverage, Maruyama Mfg. Co., Inc. will repair or replace, free of charge, for the original purchaser and each subsequent purchaser any emission-related part or parts found to be defective in material and workmanship for two (2) years from original retail delivery date except catalytic converter. Catalytic converter is warranted one year from original retail delivery date. Emission-related parts are the carburetor assembly, the ignition coil assembly, the ignition rotor, the spark plug, the catalytic converter and the fuel tank. Any replacement part that is equivalent in performance and durability may be used in non-warranty maintenance or repairs, and shall not reduce the warranty obligations of Maruyama Mfg. Co., Inc.

Any replacement part that is equivalent in performance and durability may be used in non-warranty maintenance or repairs, and shall not reduce the warranty obligations of Maruyama Mfg. Co., Inc.

This warranty does not cover the following:

1. Maintenance items (excluding defects in materials and workmanship) including hoses, spark plugs, starter rope, air and fuel filters, clutch shoes, vibration isolators, throttle cables and all cutting attachments, etc.
2. Extra expenses including shipping and handling, travel, payment for lost time or pay and for any inconvenience and storage.
3. Alterations or modifications including aftermarket parts not authorized by Maruyama U.S., Inc.
4. Wear, accident, abuse, neglect, misuse, negligence, improper fuels, lubricants, fuel mixtures (when applicable), or failure to operate or maintain the product in accordance with instructions approved by Maruyama, repair or replacement as provided under this warranty is the exclusive remedy of the consumer.

Maruyama shall not be liable for any incidental or consequential damages for breach of any express or implied warranty on these products except to the extent prohibited by applicable law. Any implied warranty of merchantability or fitness for a particular purpose on these products is limited in duration to the warranty period as defined in the limited warranty statement. Maruyama reserves the rights to change or improve the design of the product without notice and does not assume obligation to update previously manufactured products.

This warranty provides you with specific legal rights, which may vary from state to state. It is the Owner's and Dealer's responsibility to make sure the Warranty Registration Card is properly filled out and mailed to Maruyama U.S., Inc. Proof of purchase and registration will be required in order to obtain warranty service.

To locate an Authorized Maruyama Servicing Dealer nearest you, contact:

Maruyama U.S., Inc.
3570 Shelby Lane Denton, TX 76207 U.S.A
940-383-7400
maruyama@maruyama-us.com  www.maruyama-us.com

ADJUSTMENT

IDLING SPEED ADJUSTMENT

1. Idle speed is the only available adjustment.
2. Do not tamper with the carburetor setting to increase the maximum engine speed.
3. If adjustment is needed, have it performed by your authorized Kawasaki engine dealer.

Carburetor adjustments are made at the factory and are not adjustable without disassembling the carburetor.

MAINTENANCE

PERIODIC MAINTENANCE CHART

Always remove the spark plug cap from spark plug when servicing the engine to prevent accidental starting.

Note: The service intervals indicated are to be used as a guide. Service to be performed more frequently as necessary by operating condition.

M: Service to be performed by an authorized Maruyama engine dealer.
★: Service more frequently under dusty conditions.
FUEL RECOMMENDATIONS

FUEL
The Kawasaki TE series 2-stroke engines require a gasoline-oils mixture. Use only clean, fresh, unleaded regular grade gasoline.

Octane Rating
The octane rating of a gasoline is a measure of its resistance to “knocking”. Use a minimum of 87 octane of the antiknock index is recommended. The antiknock index is posted on service station pumps in the U.S.A.

NOTE:
• If “knocking or pinging” occurs, use a different brand of gasoline or higher octane rating.

WARNING:
Gasoline is extremely flammable and can be explosive under certain conditions. Turn the engine switch OFF. Do not smoke. Make sure the area is well ventilated and free from any source of flame of sparks: this includes any appliance with a pilot light.

2-STORIKE ENGINE OIL MIXING
Oil must be mixed with the gasoline to lubricate the piston, cylinder, crankshaft, bearings, and connecting rod bearings.
Recommended Engine Oil: 2-stroke air cooled brand oil
Gasoline and engine oil mixing ratio: 50 : 1 (gasoline 50, 2-stroke Engine Oil 1)

NOTE:
• Do not mix gasoline and oil directly in the fuel tank.
• The lubricative quality of this mixture deteriorates rapidly.
• Do not use gasoline that has been stored longer than two month.
• To ensure proper starting at low ambient temperatures, fresh winter grade fuel must be used.

CAUTION The engine is shipped without fuel.

MARUYAMA LIMITED WARRANTY
CALIFORNIA AND FEDERAL EMISSIONS CONTROL SYSTEMS SMALL OFF-ROAD ENGINES

The California Air Resources Board, the Environmental Protection Agency (EPA), and Maruyama, U.S. (hereinafter “Maruyama”) are pleased to explain the Emissions Control Systems Warranty on your Maruyama small off-road engine. In California and other states, new small off-road engines must be designed, built and equipped to meet stringent anti-emission standards. Maruyama must warrant the emissions control system on your small off-road engine for the period of time listed below provided there has been no abuse, neglect or improper maintenance of your small off-road engine. Your emissions control system may include parts such as the carburetor or fuel-injection system, the ignition system, and catalytic converter. Also included may be hoses, belts, connectors and other emissions related assemblies. Where a warrantable condition exists, Maruyama will repair your small off-road engine at no cost to you including diagnosis (if the diagnostic work is performed at a Maruyama small off-road engine dealer), parts and labor.

OWNERS WARRANTY RESPONSIBILITIES. The following obligations must be fulfilled by the owner to maintain the validity of the Maruyama California / EPA Emissions Systems Warranty:
(a) As the small off-road engine owner, you are responsible for the performance of the required maintenance listed in your owner’s manual. Maruyama recommends that you retain all receipts covering maintenance on your small off-road engine, but Maruyama cannot deny warranty solely for the lack of receipts or for your failure to perform any of the required maintenance.
(b) You are responsible for presenting your small off-road engine to an authorized Maruyama small off-road engine Dealer as soon as a problem exists. The warranty repairs should be completed in a reasonable amount of time, not to exceed 30 days.
(c) As the small off-road engine owner, you should also be aware that Maruyama may deny you warranty coverage if your small off-road engine or a part has failed due to abuse, neglect, improper maintenance or unapproved modifications.
(d) If you have any questions regarding your warranty rights and responsibilities, you should contact Maruyama, U.S., INC., 3570 Shelby Lane Denton, TX 76207 U.S.A. 940-383-7400.

1. COVERAGE. Maruyama warrants to the initial owner and each subsequent purchaser that the small off-road engine is free from defects in materials and workmanship which cause a failure of a warranted part for a period of two years. Maruyama does not warrant any parts installed on the engine by Maruyama or any other person or organization. The emissions related warranted parts are specifically defined by the California Air Resources Board’s Emissions Systems Warranty Parts List. (EPA’s regulations do not include a parts list, but EPA considers emissions-related parts to include all parts listed here.) These warranted parts are: carburetor and internal parts, spark advance/retard system, cold start enrichment system, magneto or electronic ignition system, catalytic converter, intake manifold, exhaust manifold, air cleaner element, carbon canister, fuel tank, fuel tank cap, and spark plugs if failure occurs prior to the first required scheduled replacement. Hoses, clamps, fittings, gaskets, sealing devices, mounting hardware and tubing used directly in these parts. Since emissions related parts may vary slightly from model to model, certain models may not contain all of these parts and certain models may contain functionally equivalent parts.

2. LIMITATIONS. This Emissions Control Systems Warranty shall not cover any of the following:
(a) Repair or replacement required as a result of (i) misuse or neglect, (ii) lack of required maintenance, (iii) repairs improperly performed or replacements improperly installed, (iv) use of replacement parts or accessories not conforming to Maruyama specifications which adversely affect performance and/or durability, (v) alterations or modifications not recommended or approved in writing by Maruyama.
(b) Replacement of parts and other services and adjustments necessary for required maintenance at and after the first scheduled replacement point.

CONTINUED
EMISSION CONTROL INFORMATION

FUEL INFORMATION
This engine is certified to operate on unleaded regular grade gasoline only. A minimum of 87 octane of the antiknock index is recommended. The antiknock index is posted on service station pumps in the U.S.A.

EMISSION CONTROL INFORMATION
To protect the environment in which we all live, Kawasaki has incorporated an exhaust emission control system in compliance with applicable regulations of the United States Environmental Protection Agency and the California Air Resources Board. If you purchased your (Blower, Trimmer, Hedge Trimmer) in the state of California, the engine has an assigned durability period of 300 hours.

EXHAUST AND EVAPORATIVE EMISSION CONTROL SYSTEM
The system reduces the amount of pollutants discharged into the atmosphere by the exhaust of this engine. The fuel tank, ignition and exhaust systems of this engine have been carefully designed and constructed to ensure an efficient engine with low exhaust pollutant and low evaporative emission levels. If you purchased your (Blower, Trimmer, Hedge Trimmer) in the state of California, the engine included catalytic converter system, and the fuel tank includes low evaporative emission system.

MAINTENANCE AND WARRANTY
Proper maintenance is necessary to ensure that your engine will continue to have low emission levels. This Owners Manual contains those maintenance recommendations for your engine. Those items identified by the Periodic Maintenance Chart are necessary to ensure compliance with the applicable standards.

As the owner of the (Blower, Trimmer, Hedge Trimmer), you have the responsibility to make sure that the recommended maintenance is carried out according to the instructions in this Owners Manual at your own expense.

The Maruyama Limited Emission Control System Warranty requires that you return your (Blower, Trimmer, Hedge Trimmer) to an authorized Maruyama (Blower, Trimmer, Hedge Trimmer) dealer for remedy under warranty. Please read the warranty carefully, and keep it valid by complying with the owner's obligations it contains.

TAMPERING WITH EMISSION CONTROL SYSTEM PROHIBITED
Federal law and California State law prohibit the following acts or the causing there of: (1) the removal or rendering inoperative by any person other than for purposes of maintenance, repair, or replacement, of any device or element of design incorporated into any new engine for the purposes of emission control prior to its sale or delivery to the ultimate purchaser or while it is in use, or (2) the use of the engine after such device or element of design has been removed or rendered inoperative by any person.

Among those acts presumed to constitute tampering are acts listed below:
Do not tamper with the original emission related parts.
• Carburetor and internal parts
• Spark plug
• Magneto or electronic ignition system
• Fuel filter
• Muffler or any internal portion of the muffler
• Air cleaner element
• Fuel Tank
Cooling fins
Free passage of air through the cylinder cooling fins is required to prevent poor engine performance and shortened engine life. Regularly check and clean all debris from the cooling fins by removing the engine cover (see sketch).

Muffler and exhaust ports
The muffler should be removed and serviced after each one hundred (100) hours of use. At the same time, the exhaust ports should be cleaned and inspected. An AUTHORIZED MARUYAMA DEALER should be contacted for this service.

General cleaning and tightening
The MARUYAMA power blower will provide maximum performance for many hours, if it is maintained properly. Good maintenance includes regular checking of all fasteners for correct tightness, and cleaning the entire machine. Contact an authorized MARUYAMA dealer for additional maintenance suggestions.

Storage
For long-term storage of the MIST DUSTER, first perform all regular maintenance procedures and needed repairs. Empty the fuel tank. Disconnect the fuel supply line from the carburetor and depress the primer bulb until fuel stops discharging from the fuel-return line. Start the engine and allow it to run until it stops. Pull the starter cord a few times to remove any excess fuel from the engine. Remove the spark plug and insert a small amount of oil into the cylinder. Slowly pull the starter cord and bring the piston to a position closest to the spark plug hole. Re-install the spark plug. Apply a thin coating of oil to all the metal surfaces and store the power blower in a dry place. Clean shutter area between applications of Duster Attachment. Clean chemical tank.

WARNING
1) Read and understand the owner's manual before using the MIST DUSTER. Be thoroughly familiar with the proper use of the sprayer.
2) Never allow children to operate the MIST DUSTER. It is not a toy. Never allow adults to operate the unit without first reading the owner's/operators manual.
3) Become familiar with the controls and know how to stop the engine quickly.
4) Always use eye protection and hearing protection.
5) Keep the area of operation clear of all persons, particularly small children and pets.
6) Do not point the discharge hose in the direction of children or pets.
7) Never operate MIST DUSTER when you are fatigued.
8) Never operate MIST DUSTER without proper guards or other protective safety devices in place.
9) Dress properly. Do not wear loose clothing or jewelry that can be caught in moving parts. Always wear substantial footwear, long pants, and long sleeved shirt.
10) Gasoline is highly flammable, handle it carefully.
   a) Do not smoke while handling gasoline.
   b) Use an approved fuel container for storing gasoline.
   c) Do not fill the fuel tank when the engine is hot or running.
   d) Fill the fuel tank outdoors and only up to one-half inch from the top of the tank. Do not fill the filler neck.
   e) Wipe away any spilled gasoline before starting the engine.
11) Always be sure of your footing; keep a firm grip on discharge hose when applying spray.
12) Use the correct accessories. Do not use the MIST DUSTER for any job except that for which it is intended.
13) Keep all fasteners tight and be sure the MIST DUSTER is in safe working condition. Follow the maintenance instructions provided in this manual.
14) Do not put hands or feet near or under rotating parts. Keep clear at all times.
15) If the MIST DUSTER should start to vibrate abnormally, stop the engine immediately and check for the cause. Vibration is generally a warning of trouble.
16) Avoid using the MIST DUSTER near rocks, gravel, stones and similar matter in order to avoid dangerous flying debris.
17) Use the MIST DUSTER only in daylight or good artificial light.
18) Do not allow bystanders in work area.
19) Do not operate without guard(s) in place.
20) Do not operate in unventilated area.
21) To reduce the risk of injury associated with the inhalation of dust, always use a respirator.
22) To reduce the risk of injury associated with contacting rotating part, stop the engine before removing attachments.
23) To reduce the risk of fire or burn injury:
   a) Move at least 10ft (3m) away from the fueling point before starting engine.
   b) always store gasoline in approved container.
SAFETY PRECAUTIONS FOR APPLYING CHEMICALS

Wear appropriate protection when spraying chemicals to eliminate hazard caused by contact with skin or inhalation of chemicals (herbicides, pesticides, etc.). Always wash clothing thoroughly after applying chemicals. Shower with soap and water after applying any chemicals. Always read and follow all chemical cautions or handling and usage instructions supplied by the chemical manufacturer. Remember, many chemicals are considered hazardous.

Dispose of chemical containers as instructed on chemical label.

Inspect equipment for loose screws, and damage to parts before starting operation.

Check connections of spray hose, nozzle, etc., for leakage. (Mist application)

Inspect proper ventilation when you operate the equipment in a greenhouse or other enclosed area.

Dilute and prepare chemicals in accordance with chemical manufacturer's instructions.

Make sure the covers of chemical tank and fuel tank are secured.

The MARUYAMA MIST DUSTER comes with an Owner's / Operator's Manual and a Warranty Registration Card.

REGULAR MAINTENANCE

Before each use, the MIST DUSTER should be inspected for proper assembly and fitness of all components. All fasteners should be checked for correct tightness. Always inspect for fuel leaks.

**WARNING** Do not attempt to start or operate a MIST DUSTER that indicates a fuel leak.

**AIR FILTER**

The air filter should be inspected each time the MIST DUSTER is used (or more often with extreme conditions).

To inspect, remove the air filter cover and remove the filter from the case. Clean air filter(s) and the cover with compressed air or wash the filter(s) in soapy water.

**SPARK PLUG**

The spark plug should be removed from the engine and checked after each fifty (50) hours of use. The tips can be cleaned with a stiff brush. Adjust the gap to 0.024 - 0.028 inches (see sketch). Replace the spark plug if it is oil-fouled or damaged.

**CAUTION**

The correct torque for the spark plug is 10 - 12 ft. lbs. Do not over-tighten.

**FUEL FILTER**

The fuel filter should be cleaned and inspected for damage after each twenty (20) hours of use. The fuel filter is attached to the fuel pick-up tube inside the fuel tank. Loosen the clamp and take out the fuel filter.
Assembling (DL chemicals)
- Insert the discharge plate into the discharge outlet of the multi-blind head assembled in the picture below.

T-TYPE MULTI-BLOW HEAD
(REGULAR DUST AND DL CHEMICALS)
Assembling (Regular dust chemicals)

Assembling (DL chemicals)
- Insert the discharge plate into the discharge outlet of the multi-blind head assembling in the picture below.
ASSEMBLING, ADJUSTMENT OF MIST NOZZLE
(For MD155DX / MD155)

1. Attach pressure pipe to pipe joint in lid.
2. Install strainer and guide in chemical tank opening.
3. Assemble flexible pipe, straight pipe and bent pipe to Mist Duster.
4. Attach vinyl pipe, mist cock and mist nozzle to pipe assembly.

**PREPARATIONS FOR STARTING**

Check that screws of equipment are not loose.

**FUEL**

- Always use blended fuel.
- Only 2-cycle oil should be used.

Do not overfill fuel tank.
Do not spill fuel onto the engine.

**WARNING:** Gasoline is highly flammable and explosive. You can be burned or seriously injured when handling fuel. Stop the engine and keep heat, sparks, and flame away. Handle fuel only outdoors. Wipe up spills immediately.

**FUEL: MIXING GASOLINE AND OIL**

*CAUTION!* The engine used on this MIST DUSTER is of a 2-cycle design. The internal moving parts of the engine, i.e., crankshaft bearings, piston pin bearings and piston to cylinder wall contact surfaces, require oil mixed with the gasoline for lubrication. Failure to add oil to the gasoline or failure to mix oil with the gasoline at the appropriate ratio will cause major engine damage which will void your warranty. For your fuel premix, only use Maruyama 50:1 2-Cycle Oil or a quality oil designed for 2-cycle air-cooled engine.

**FUEL MIXTURE:** When using genuine Maruyama 50:1 2-Cycle Oil, or a quality oil designed for 2-cycle air-cooled engines, oil ratio is 50 parts gasoline to 1 part oil or 50:1.
**FUEL: MIXING GASOLINE AND OIL**

**CAUTION!** If Maruyama brand oil is not used, never use a mixing ratio less than 50:1 regardless of the oil package mixing instructions. Ratios less the 50:1, (for example, 60:1, 80:1, 100:1), reduce the amount of lubrication to the internal moving parts of the engine and can cause damage.

**MIXING INSTRUCTIONS:** Always mix fuel and oil in a clean container approved for gasoline. Mark the container to identify it as fuel mix for the MIST DUSTER. Use regular unleaded gasoline and fill the container with half the required amount of gasoline. Pour the correct amount of oil into the container then add the remaining amount of gasoline. Close the container tightly and shake it momentarily to evenly mix the oil and the gasoline before filling the fuel tank on the MIST DUSTER.

<td>6.4 oz.</td>
</tr>
<tr>
<td>5 gallons</td>
<td>12.8 oz.</td>
</tr>
</tbody>
</table>

When refilling the MIST DUSTER fuel tank, clean around the fuel tank cap to prevent dirt and debris from entering the tank during cap removal. Always shake the premix fuel container momentarily before filling the fuel tank.

Always use a spout or funnel when fueling to reduce fuel spillage. Only fill the tank to within 1/4-1/2 inch from the top of the tank. Avoid filling to the top of the tank filler neck.

**NOTE:**
1. Never mix gasoline and oil directly in the MIST DUSTER fuel tank.

**CAUTION!**
1. Do not use National Marine Manufacturer’s Association (NMMA) or BIA certified oils. This type of 2-cycle engine oil does not have the proper additives for air-cooled, 2-cycle engines and can cause engine damages.
2. Do not use automotive motor oil. This type of oil does not have the proper additives for air-cooled, 2-cycled engines and can cause engine damage.

---

**OPERATION DATA & REFERENCE**

**Walking speed**

Walking speed (m/sec) = 16.7 \( \times \) \( \frac{\text{Discharge rate (kg/min)}}{\text{Blowing volume (kg) per 10764 ft}^2 (1000 \text{m}^2) \times \text{Blow width (m)}} \)

**Calculation of discharge rate**

\[ \text{Discharge rate (kg/min)} = \frac{\text{Tank chemicals} \times 60}{\text{Required seconds to discharge tank chemicals}} \]

How to decide the discharge rate: Using the graphs on the preceding page as a scale, set the degree of shutter aperture and perform the first blowing operation. Record the time (by seconds) required for that blowing and calculate the discharge rate, using the above formula.

**Blowing volume**

<table>
<thead>
<tr>
<th>Blowing conditions</th>
<th>Blowing volume (per 10764 ft(^2) (1000 m(^2)))</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insecticide</td>

</tr>
</tbody>
</table>

**CAUTION**

- Discharge rate is different according to Chemicals or Fertilizer
- You can calculate you walking speed if you apply the above values to the formula on the preceding page.
- Average aperture of the shutter corresponding to the normal walking speed (0.4~0.6m/sec) is as follows:
**PERFORMANCE GRAPH FOR DISCHARGE**

- Use the preceding graphs as a scale of reference for setting the degree of shutter aperture. Try to blow all fertilizer or seeds continuously without stopping until the tank goes empty. Don’t stop the blowing operation on the way, leaving chemicals in the tank or store the machine with chemicals in the tank, otherwise it will be vulnerable to rust and stain. If closing the shutter when there remain fertilizer or seeds in the tank, lower the shutter lever slowly. If the shutter is suddenly closed or forced to shut, fertilizer or seeds may be caught between the shutter and tank bottom packing, which not only prevents the shutter from closing all the way, but may also causes troubles. When fertilizer or seeds get stuck during operation, raise the shutter one stage upper to increase fan speed.

Cleaning

- Do the same cleaning procedures as stated in the dust blower, but because of fertilizer being highly hygroscopic and corrosive, clear the tank of residual chemicals thoroughly.

**OPERATING INSTRUCTIONS**

**STARTING PROCEDURE**

STEP #1) Pump the "PRIMER BULB" under of the carburetor until fuel can be seen flowing through the "FUEL-RETURN LINE".

STEP #2) Move the "CHOKE LEVER" fully upward to the closed position. If the engine is already warm, only a partial or open (no choke) choke setting may be required.

STEP #3) Turn the stop switch ON. (Confirm that the stop switch is at the starting position.)

STEP #4) Set the throttle lever at 1/2 speed.

**CAUTION**

Pull the "STARTER GRIP" briskly to start the engine.

NOTE: Only short pulls are necessary. Never pull the starter cord to its fullest extension. Never let go of the starter grip until it is at the fully returned position.
STEP #5) Warming up the engine.

When the engine has started, slowly move the "CHOKE LEVER" fully downward to the open position. Allow the engine to "WARM-UP" at less than 1/2 speed.

If a MARUYAMA engine fails to start after following the above procedures, contact an authorized MARUYAMA dealer.

OPERATION

When the engine has warmed-up, the MIST DUSTER can be positioned on the back of the operator.

When the MIST DUSTER is positioned and ready for operation, adjust the throttle to a speed required to accomplish the task.

DUSTING

- The proper way is to hold the end of the blow-head lightly. Moving the blow head up and down slightly during operation helps let chemicals go smoothly and efficiently. For others, see the chapter, "Dust Blower".

DANGER

- Do not stand between Worker and Assistant.

Multi-blow pipe for granules (N20, N30, N40, H20 and H30)

Assembling

<table>
<thead>
<tr>
<th>N20, N30, N40</th>

</tr>
</thead>
<tbody>
<tr>
<td>Hold horizontally</td>
<td></td>
</tr>
<tr>
<td>Multi-blow pipe</td>
<td></td>
</tr>
<tr>
<td>Throttle adjustment</td>
<td></td>
</tr>
</tbody>
</table>

Granule blowing

- Hold the pipe horizontal
- About 30cm ahead
- Don't shake
- O Round granules
- X Angular granules
- Blow head is vulnerable
- X Dust: Avoid using it

Wind

Granules blowing is difficult when it winds at more than 3m/sec when small branches sway.
**OPERATION FOR DUSTER**

1. Mount on your back.
2. Maximum speed.
3. Start to blow dust chemicals.

**STOPPING**

1. At first, (Duster Application)
   Shut up lever should be moved “Q” position.

2. Next,
   Throttle lever should be moved most down position.

3. Move the stop switch to the “STOP” position.

**“CARPET BLOW-PIPE” Assembling**

</tbody>
</table>

**OPERATION FOR MD155DX / MD155**

**HOW TO CHARGE THE CHEMICALS**

1. Close the mist cock.
2. Pour the liquid chemicals.
3. Tighten the lid securely.

**CAUTION**

- In using hydrate solution (Solution of wettable power), agitate it well before charging the tank.
- Spray chemicals out of the tank as early as possible after charged. Keeping it in the tank for extended periods will allow it to separate in the tank.

1. Mist cock
2. Adjustment of discharging volume

- Coincide the number on the dial of volume switch with the market.
- Discharging volume will increase accordingly as the number increases.

**CAUTION**

- Avoid using too dense hydrate solution.
- For spraying denser hydrate, use U.L.V. (Ultra Low Volume) nozzle.
PREPARATIONS FOR DUSTER ATTACHMENT AND MD157D / MD159D

• Stop the engine.
• Check that screws of equipment are not loose.

ATTACH DUSTER ATTACHMENT

1 Change DUSTER tank assembly.

MIST TANK ASSEMBLY DUSTER TANK ASSEMBLY

2 Shutter lever position is “0”.

3 Set connecting rod into “ ” setting and tighten lock nut. Adjust as necessary.

4 Secure connecting rod assembly with R-pin.

5 Chemical charging.
• Be sure to use the right chemicals and make sure it is pure and dry.

CAUTION
When connecting Rod is set to link arm. Link arm must be turned right full.

Must set shutter link position Depending on Dust or Granular Size. Dustor and Granular Size.
